

UPENDRA KUMAR MAHTO

Noida, Uttar Pradesh | ukiaf11@gmail.com | 6209927804

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with expertise in building scalable microservices, managing complex multi-tenant architectures, and integrating advanced AI tools. Proficient in developing robust backends using Django and dynamic frontends with React. Experienced in financial technology integrations, secure cloud credential management, and creating automated, user-customizable SaaS solutions. Adept at utilizing modern development environments to bridge the gap between innovative infrastructure and seamless user experiences.

SKILLS

Languages: Python, JavaScript, HTML, CSS

Frontend Frameworks: React

Backend & Architecture: Django, Django REST Framework (DRF), Microservice Architecture, WebSockets, Webhooks

Databases: PostgreSQL, MySQL, Redis

Infrastructure & Security: Docker, Git, Google Secret Manager

Third-Party Integrations: Razorpay, ExchangeRate-API, Postman

AI Integration & Tools: Gemini API, Claude API, Google AI Studio

Development Environments: VS Code, Cursor, Antigravity, Antigravity 2.0

PROFESSIONAL EXPERIENCE

BOL7 Technologies Private Limited

September 15, 2025 – Present

Full Stack Developer

- Manage and integrate secure backend modules, APIs, and authentication systems using Django REST Framework and Postman.
- Collaborate on backend logic and database management, utilizing containerization and version control tools like Docker and Git.

PROJECTS

Microservice SaaS Platform & Credit Service Core

- Architected a scalable SaaS platform leveraging microservice architecture, utilizing Django for the backend and React for the dynamic frontend interface.
- Engineered the central Credit Service module responsible for managing the entire transaction lifecycle (consume, add, transfer) and service pricing across the platform.
- Designed a complex, multi-tier workflow architecture supporting Admin, Reseller, Sub-reseller, and Client hierarchies.
- Implemented dynamic global pricing controls, allowing administrators to set and automate custom margins over base service costs.
- Enhanced enterprise-grade security by migrating infrastructure credentials from local .env files to Google Secret Manager.
- Engineered a financial tracking system featuring double-entry ledgers, automated real-time currency conversions via ExchangeRate-API, and Razorpay integration.

Embeddable Web-Chat & Voice Assistant Widgets

- Developed a highly customizable web-chat widget and a standalone voice assistant designed for seamless third-party website integration via generated embed codes.
- Engineered extensive personalization features, allowing end-users to configure UI aesthetics (colors, fonts, widget names) and integrate custom quick-action links (WhatsApp, phone, email).

Multi-Vendor Hotel & Food Ordering Platform

- Built a comprehensive multi-tenant platform enabling hotel owners to register, establish digital storefronts, upload inventory images, and manage real-time pricing.
- Implemented an end-to-end customer order management system that supports both immediate and scheduled food delivery requests.

Social Media Automation Engine

- Developed an automated scraping and publishing pipeline capable of extracting video content from Instagram and other external sources.
- Programmed direct, automated API publishing workflows to post content natively to Instagram and YouTube without manual intervention.

Vertical Farming Web Platform

- Developed a specialized backend web application tailored for a vertical farming initiative.
- Utilized Django to create robust data models supporting the intersection of agricultural technology, data management, and operational tracking.
